

The **pml** ranges of Control and Junction Boxes are custom built to suit Clients needs.

## Test and Control Boxes

A wide range of Test and / or Control Boxes can be manufactured to suit your every need.

The box shown is used to control the output from a bank of Sacrificial Anodes in a high resistivity environment.

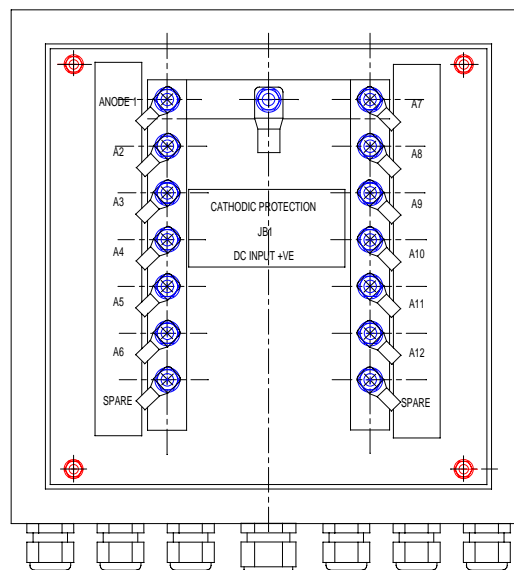

Other boxes may be used to control output to multiple Impressed Current Anodes with, or without, resistance control and with integral shunts to allow monitoring of current flow in individual circuits or to control the current flowing to different structures.

## Junction Boxes

In many Cathodic Protection applications it will be necessary to split the applied current from one circuit to a number of sub-circuits - the box shown is typical of boxes supplied for this duty.

The range of Box applications is, necessarily, wide and **pml** will be pleased to design and supply to meet your specific requirements or to supply against your own designs.

Please contact us with your box requirements at the address below.
