

Retractable Coupon Insertion Systems Data Sheet

The **pml** range of Retractable Coupon Insertion Systems is available to suit all your monitoring requirements

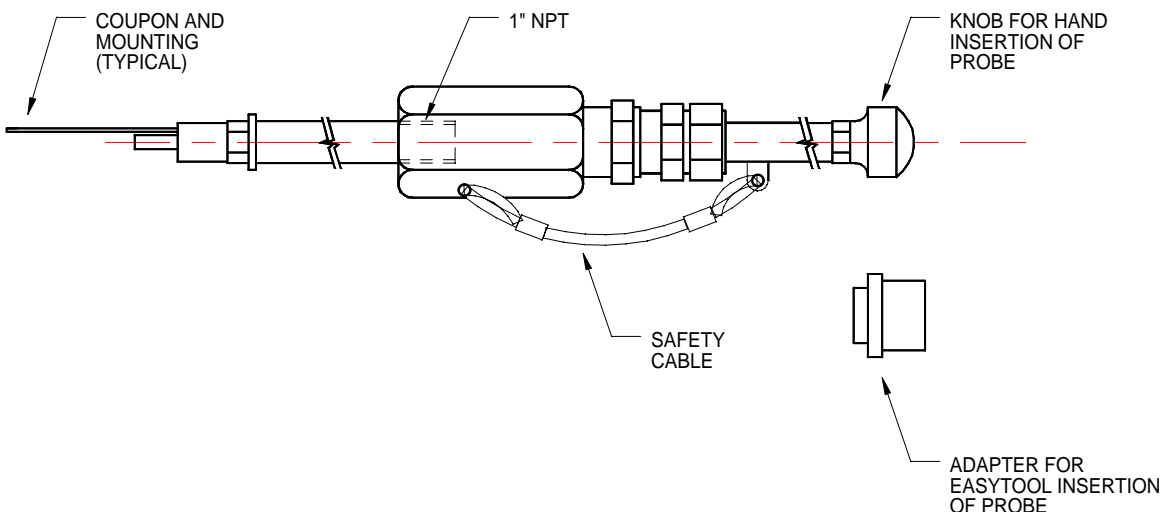

The **pml** Coupon Insertion Systems are retractable and are frequently used in high pressure and high temperature applications.

By using a specially designed packing gland, it is possible to insert or retract a coupon from a pressurised system without a process shutdown.

The insertion system is designed to mount onto a 1" piping system but can easily be adapted to suit specific requirements

The system comprises an insertion rod with a coupon holder and a Teflon packing gland. A safety cable and safety nut are also provided to prevent blow-out.

A range of lengths is available together with alternative packing materials for high temperature applications.
